

Prototype -- Group 17

- Amazon Price service offers different data sources. Through our endpoint search we offer the possibility of searching Amazon products in any country by keyword returning a list of results ordered by relevance with a detail of each product found (image, price, link to the product among others)
- By using API, you can search anything you would like to buy online. And the results will be the top 10 related items with title, price and image. You can also click specific item to get detail results – created time.
- For example, if your input is "coke", you will get a list of coke items with prices and images.
